SUMMARY

Junior full-stack developer working in TypeScript, React, Node.js, Python and PostgreSQL. Built an e-commerce platform for a Montreal skincare brand in a 4-person team, a real-time iOS + Node app deployed on AWS that stays correct across multiple servers, and an LLM evaluation and red-team suite that found and fixed a data leak in a RAG assistant.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Swift, Java, C#, SQL
Front End: React, Next.js, Vite, Tailwind CSS, HTML5, CSS3
Back End: Node.js, Express, FastAPI, REST APIs, JWT auth, WebSocket
Databases: PostgreSQL (pgvector), MongoDB, Redis, MySQL, SQL Server
AI / LLM: Claude API, RAG, LLM evaluation (promptfoo, LLM-as-judge), OWASP Top 10 for LLM Applications
Mobile: SwiftUI, Swift 6 concurrency, Firebase, Android (Java)
Languages (spoken): English (advanced), French (intermediate)
Tools: Git, GitHub Actions (CI), Docker, Docker Compose, AWS (EC2, RDS), Vercel, Postman, node:test, pytest, Swift Testing

EXPERIENCE

Full-Stack Web Developer 05/2026 – 07/2026
Balade Bucolique (formerly Wild Natural Products and Events), Montreal, QC | github.com/GuillaumeYue/WildNatural

- Owned the front end of a MERN e-commerce platform for a botanical skincare brand (React, Vite, Tailwind CSS), replacing a legacy PHP/HTML site; authored 26 of the team's 44 commits.
- Built the shopping flow: product showcase and detail pages, cart, checkout with Quebec sales tax (GST/QST) and promo codes, and order confirmation.
- Integrated a teammate's Express/MongoDB backend (JWT auth, cart, orders, products) and fixed integration bugs in the auth middleware, route loading and environment configuration.
- Added an English/French toggle across all customer-facing pages and built the admin dashboard on live order and product data.
- Worked in a 4-person Agile team (daily standups, shared GitHub branches) through several founder-directed scope changes.

PROJECTS

loi25-rag-eval | LLM evaluation and red-team suite for a RAG assistant 10/2026
Python, FastAPI, PostgreSQL + pgvector, Claude API, promptfoo, React, GitHub Actions. github.com/GuillaumeYue/loi25-rag-eval

- Built a RAG assistant over Quebec's privacy law (Loi 25) as a test subject, with 40 accuracy cases scored by an LLM judge and 26 OWASP-tagged red-team cases, run against a baseline and 4 mitigations behind flags.
- Found that the baseline served a confidential internal note to public users (Sensitive Information Disclosure passed in 5% of attempts); filtering by classification in the retrieval query raised it to 100% with no loss of accuracy and no over-blocking of employees.
- Traced an impossible first result to 3 defects in the eval itself and fixed them before recording numbers; added an LLM-judge leak check after finding paraphrased leaks the fact list missed.
- Wrote the README as a traceable test report (every number links to a dated result file); CI runs lint and tests on every push.

Huddle | Real-time group decision app (iOS + Node.js backend) Backend live on AWS · iOS pre-release
Swift 6, SwiftUI, TypeScript, Express, WebSocket, PostgreSQL, Redis, Docker, AWS (EC2, RDS). github.com/GuillaumeYue/Huddle
Friends join a room by code, swipe on nearby restaurants (Google Places), and a reveal shows the place everyone said yes to.

- Built the SwiftUI client and a TypeScript/Node WebSocket backend that runs correctly on multiple server processes: PostgreSQL holds durable state and Redis pub/sub relays events between servers.
- Deployed the backend on AWS: Docker Compose on EC2 behind Caddy (HTTPS), PostgreSQL on RDS, live at api.yuehan.dev.
- Made sure a round settles only once when two servers trigger it at the same moment (all votes in vs. inactivity timeout), using a conditional SQL UPDATE instead of locks; verified with automated race tests.
- Handled unreliable connections: the iOS app queues actions offline and replays them on reconnect, idempotency keys make retries safe, and clients resync from a snapshot plus deltas.
- Kept the Swift and TypeScript message formats in sync with shared JSON fixtures tested on both sides, plus about 70 automated end-to-end checks; recommendations run in a separate worker through a Redis job queue.

EDUCATION

DEC (3-year technical college diploma), Computer Science Technology (420.B0) 2023 – 2026
LaSalle College, Montreal, QC
